Na Koa Ikaika o Ka Lahui Hawaii (Affiliate of Indigenous World Association)
Professor Ray Hilborn, University of Washington
Western Pacific Regional Fishery Management Council
Pet Industry Joint Advisory Council
General public

Concerns also raised by US Senator Brian Schatz and US Representative Colleen Hanabusa

Why the US Pacific Islands Oppose Monument Expansion

1. **Negatively impacts US Pacific Islands and US fisheries**
2. **Lacks conservation benefits**
3. **US and international ocean policy and laws already exist**
4. **Well managed, sustainable fisheries is a better ocean legacy**
– the US Pacific Island Way

“Fishing Is the Ocean and Fishing Is Life ...”

Lt. Gov. Lemanu Peleti Mauga

American Samoa

“I also request that the National Ocean and Atmospheric Administration (NOAA) extend Town Hall meetings to American Samoa and other U.S. Territories that will be affected by any expansion of the PRIMNM.”

---US Congressman Eni F. H. Faleomavaega, American Samoa (July 18, 2014)

“Policy on oceans should come through Congress. This is really an example of the administration simply not giving information on what it is doing.”

---Doc Hastings, Chairman, US House Committee on Natural Resources

“Mr. President, the available data affirms the fact that the loss of fishing grounds due to the proposed expansion will translate to fisheries related economic loss caused by the decline in the supply of fish to the canneries which will no doubt trigger an economic recession for the Territory of American Samoa’s economy. The cannery employs 1/3 of the American Samoa workforce. It means that a total of 2,177 jobs will be lost within the tuna cannery industry if this expansion goes through.”

---Governor Lolo Moliga, Territory of American Samoa (August 14, 2014)

“Alaskans know what happens when the President unilaterally closes millions of acres of public lands---it means a loss of jobs and a hit to the economy.”

---US Senator Lisa Murkowski, Alaska,

“It is also demoralizing and quite disturbing that the proponents for the expansion of the Pacific Remote Islands Marine National Monument are individuals who have no basic understanding of what such actions will do to the lives of the people who will be shattered by these ‘feel good’ national initiatives.”

--Governor Lolo Moliga, Territory of American Samoa (July 21, 2014)

“As Governor, I hope you will appreciate my perspective on how implementing an advocacy-based conservation agenda under the Antiquities Act can negatively affect the island communities in the Western Pacific. The Marianas archipelago is home of the Marianas Trench Mariana National Monument, a paper park that has been mostly neglected since it was designated in 2009. ... I find it ironic that the primary purpose of Congress for passing the Antiquities Act was specifically to protect the culture and heritage of Native American Indians. Now, one hundred and eight years later, this very same law is being used to threaten the culture and heritage of native Pacific Islanders.”

---Governor Eloy S. Inos, Commonwealth of the Northern Mariana Islands (August 15, 2014)

“Conservationists describe the water as pristine, which implies that any human activity that has taken place over the years has had no deleterious effect. And you’ve banning fishing ... why?”

---*National Fisherman* (August 28, 2014)

“Given the good condition and low use of the marine resources in the PRIMNM area, the Nation should manage the PRIA [Pacific Remote Island Area] using the best contemporary marine resource management practices, as described in the *Final Recommendations of the Interagency Ocean Policy Taskforce*. Therefore, I humbly request that the expansion of the current Monument boundaries be tabled,”

---Governor Eddie Baza Calvo, Territory of Guam

“Our government should seek to preserve the livelihoods of our fishermen and provide waters that exclusively serve to provide an advantage for the regulated US and local fishing industry in the global market.”

---Senate Concurrent Resolution 33-20, American Samoa 33rd Legislature (August 14, 2014)

“The director general of the Forum Fisheries Agency, James Movick, says the U.S. move could drive longliners into the southern seas, further depleting the very stock the small island states are trying to conserve. ... It’s hard to see what precise management benefit would be obtained by that.”

---islandbusiness.com

“The Obama Administration’s proposed monument expansion joins a lengthy list of historical restrictions on US Pacific Island fishermen.”

---Na Koa Ikaika o Ka Lahui Hawaii (Affiliate of Indigenous World Association)

“The key question with respect to the expanded protections proposed by President Obama is what will they do to aid solutions to the problems facing oceans. I am afraid the answer to this is they will do nothing! Closing additional areas to fishing will have no impact on ocean acidification or ocean pollution, and the impact of these closures on overfishing will almost certainly be negligible.”

---Professor Ray Hilborn, School of Aquatic and Fishery Sciences, University of Washington
(August 4, 2014)

Pelagic Fisheries Are Important to the US Pacific Islands and the Nation

Hawaii Longline Fishery

A major domestic fish producer

- 80% of US bigeye tuna
- 50% of US swordfish
- 50% of US yellowfin tuna

A major supplier to total US market including imports

- 60% of US bigeye tuna market
- 14% of US swordfish market
- 4% of US yellowfin tuna market

Only 2% of Hawaii longline landings are exported.

Hawaii seafood consumption three times national average per capita.

Hawaii fishery is fresh (iced, not frozen) resulting in highest quality.

Honolulu harbor ranks 5th in the nation in landed seafood value (\$100 M).

US Purse Seine Fishery

All US Purse Seine vessels offload in American Samoa for canning at StarKist Samoa and Tri Marine

The fleet delivers approximately \$60 million in tuna annually to American Samoa canneries

American Samoa is considered a Small Island Developing State (SIDS)

- Per capita income: \$8,000
- US poverty level: ~\$13,000 (HI)

The local economy and approximately 5,000 jobs are dependent on tuna processing

Approximately 65% of American Samoa government revenue comes from federal grants, which will increase if fish landings decrease.

Guam and CNMI Tuna Fisheries

Guam and CNMI are located three to four hours flying time from every East and Southeast Asian countries and have a history of US tuna fisheries, including pole-and-line fishing, purse seining, longlining and transshipment. Guam and CNMI are Small Island Developing States. While other Pacific Islndads are actively developing their tuna fisheries with strong support from their governments, the US has undertaken policies such as closing off fishing waters that undermine rather than support fisheries in Guam and the CNMI.

Monument Expansion Will Increase US Seafood Trade Deficit and Decrease US Food Security

The US seafood trade deficit is estimated at \$11 billion

91% of seafood consumed in US is already from foreign sources

Monument expansion will reduce domestic tuna production and exacerbate the US seafood trade deficit

Monument expansion will weaken US national and local food security

US Pacific Island seafood consumption is several times the national per capita average

U.S. Seafood Trade Deficit (billion \$US) from 2000 to 2012

The US seafood trade deficit in 2012 was valued at \$10.96 billion (US Census Bureau trade data). [Source: Michigan Aquaculture Association]

Highly Migratory Tuna Fisheries Are Dynamic

Location of Fish and Fishing Effort in US Pacific Remote Island Waters Fluctuates, depending on climatic, political and economic factors

US PURSE SEINE IN THE PACIFIC REMOTE ISLANDS

YEAR	VOLUME	% of CATCH
1997	29,929 - 144,484	21 percent
1998	17,126 - 174,156	10 percent
1999	10,440 - 174,692	6 percent

The Pacific Remote Island waters are important to the US purse seine fleet in El Nino years. Due to climate change, the frequency of El Nino years is expected to double

HAWAII LONGLINE CATCH IN THE PACIFIC REMOTE ISLANDS

YEAR	% of Effort (Hooks)
2000	16 percent
2001	13 percent
2002	14 percent

The importance of the US exclusive economic zone (EEZ) around the Pacific Remote Islands to US fishermen is expected to increase due to climate change as fish stocks move eastward and due to increased fishing restrictions on high seas by international regional fishery management organizations.

Climate Change Will Move Fish and Fishing Effort Eastward

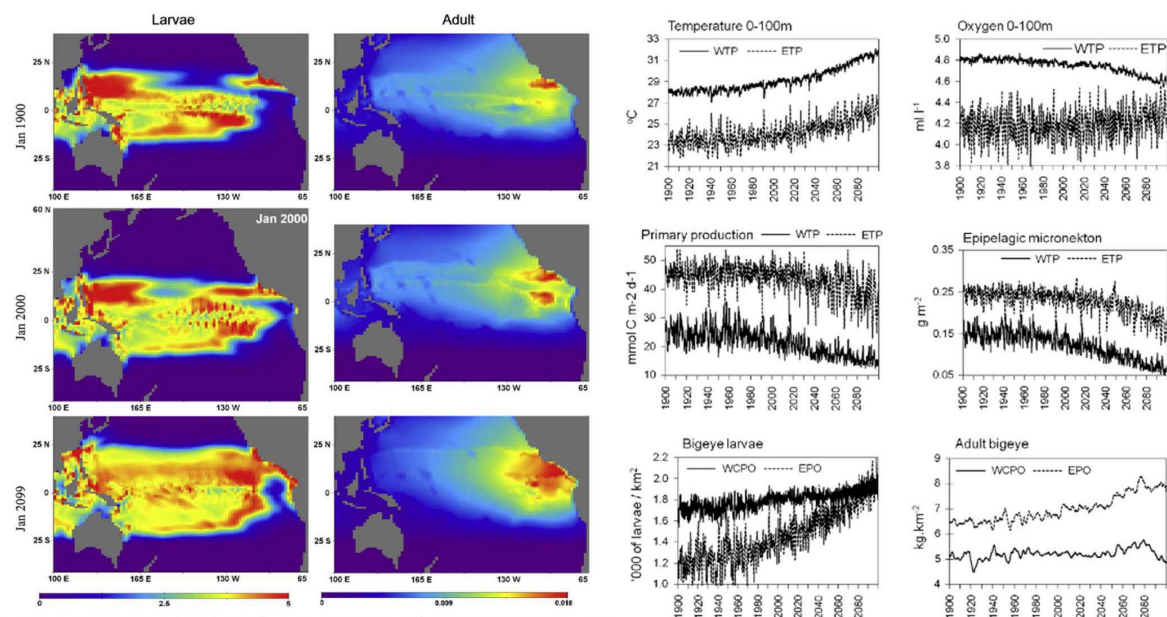

During El Niño periods, skipjack move east, increasing US purse seine reliance on US Pacific Remote Islands waters.

Climate change will double the frequency of El Niño periods.

Climate change will shift bigeye tuna populations eastward, increasing Hawaii longline reliance on the Pacific Remote Island waters.

Predicted Shift in bigeye population from climate change

Lehodey P, Senina I, Sibert J, Bopp L, Calmettes B, Hampton J, Murtugudde R (2010) Preliminary forecasts of Pacific bigeye tuna population trends under the A2 IPCC scenario. *Prog Oceanogr* 86(1–2):302–315

Hawaii Longline and US Purse Seine Fisheries Cannot Move Effort Elsewhere and Remain Profitable

Closing the US Pacific Remote Island waters to fishing will benefit the Parties to the Nauru Agreement (PNA) cartel and weaken US fisheries

- 8 member tuna cartel
- 80% of Western & Central Pacific Ocean tuna catch is from their exclusive economic zones
- 40% of global tuna supply is in their exclusive economic zones
- Supports domestic fisheries development with 100 PNA flagged purse seine vessels, operated mostly under joint venture with China, Taiwan, Korea, Philippines
- Undertaking efforts to limit access to high seas and increase fishing access fees to their EEZs (\$10K/day)

Monument Expansion Enhances China's Control Over Oceania

- Monument expansion weakens US fisheries which weakens US influence in region
- China is aggressive player in Oceania in search of natural gas, minerals, fish, and other raw materials
- China funds major capital improvement projects in Pacific Islands and provides other financial benefits
- Little US foreign aid to region reduces ability of US to counterbalance China

Monument Expansion Will Increase IUU Fishing

- US Coast Guard patrols the Pacific Remote Islands infrequently (about once per quarter)
- US vessels are the “eyes and ears” of USCG and report potential illegal foreign fishing
- Negative impacts to American Samoa canning industry will make US Port States Measures ineffective as foreign fleets move to other ports to offload tuna
- Largest illegal foreign vessel violation in US history caught in American Samoa port (violation occurred in the US EEZ around the Pacific Remote Islands)
- 20-30% of foreign imported fish consumed in US is estimated to be from illegal, unregulated, unreported (IUU) sources
- Percentage likely to increase from weakening US fisheries in Pacific
- China reprocessing is a major problem

Number of Chinese longline vessels in WCPFC area

Number of Chinese purse seine vessels in WCPFC area

Existing US and International Policy & Laws

Protect the Pacific Remote Islands

Magnuson-Stevens Fishery Conservation and Management Act (MSA, 1976)

- Nation's primary fisheries management law
- Created 8 fishery management councils
- US fisheries managed under MSA are sustainable and responsible
- National Standards prevent overfishing and require use of best available scientific information
- Requires consistency with other applicable law (e.g., Endangered Species Act, Marine Mammal Protection Act, Highly Migratory Species Act, Migratory Bird Treaty Act, National Environmental Policy Act)

Western Pacific Fishery Management Council Accomplishments

1986- Prohibited drift gill netting and bottom trawling throughout US Pacific Ocean (1.5 million square miles)

1987- Pioneered Vessel Monitoring System for fisheries globally

1990- Fostered inclusion of tuna under MSA

1992- Established spatial management areas for Hawaii longline fishery

1994- Established Hawaii longline limited entry program

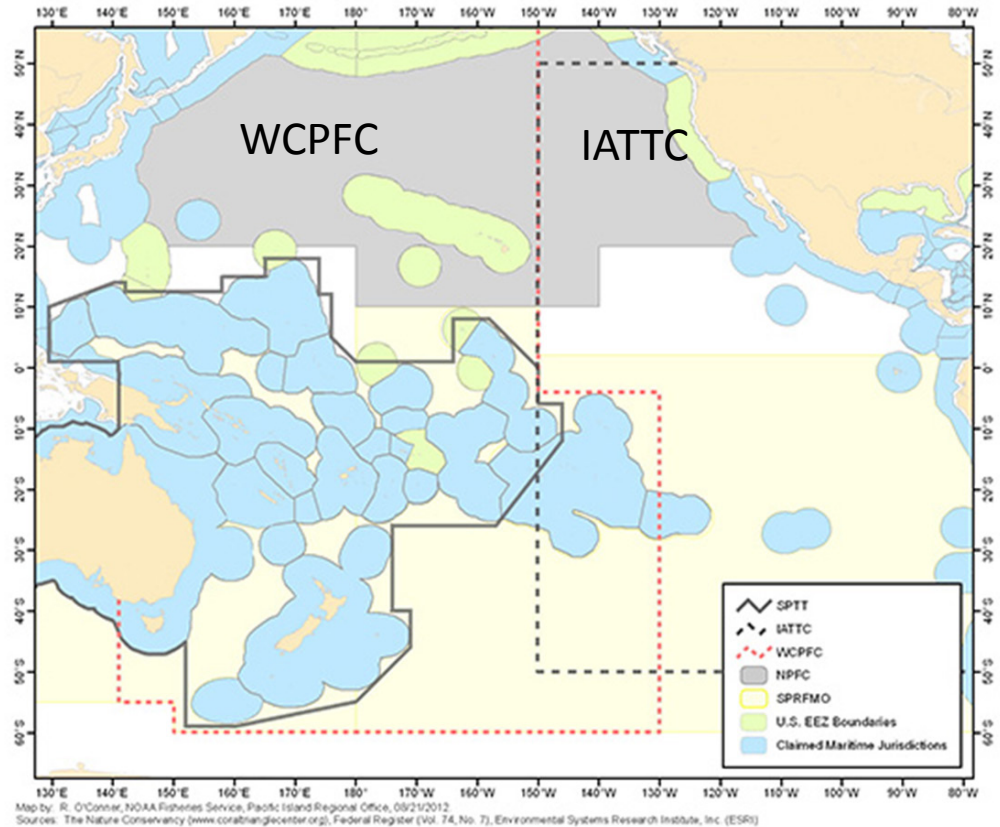

1998- Hosted & supported international meetings leading to formation of the Western & Central Pacific Fisheries Commission

2001- Created the first fishery ecosystem plan in nation (coral reefs)

2004- First in nation to implement sea turtle hard cap

2009- Established place-based Fishery Ecosystem Plans for US Pacific Islands Region

2014- Initiated 100% daily electronic reporting in Hawaii longline fleet---first in Pacific

Sharks Already Protected

The Council's Pelagic Fishery Ecosystem Plan protects pelagic sharks, with blue sharks the main species

The United States has no directed shark fisheries in Western Pacific

Gear changes reduced shark mortality by 50%

No finning allowed by the United States

No retention of oceanic white-tip, silky or whale sharks allowed in the Western and Central Pacific Ocean by purse seine or longline fisheries

Pelagic sharks migrate great distances

Marine Mammals Already Protected

Council's Pelagic Fishery Ecosystem Plan and Marine Mammal Protection Act protect all marine mammals including monk seals

Monk seals in the Northwestern Hawaiian Islands are doing very badly in a no-fishing Marine National Monument and in the Main Hawaiian Islands doing well with a 10,000 metric tons per year coastal fishery

Monk seals will never be relocated to Palmyra and Johnston as all previously relocated monk seals disappeared

Virtually no interactions (1.2 % of total) with longline vessels and marine mammals in Pacific Remote Islands

Most marine mammals observed in Pacific Remote Islands are visitors or migrants and not dependent on those islands

Pacific Remote Island Seamounts Already Protected

Council's Pacific Remote Island Areas Fishery Ecosystem Plan provides protection for seamounts.

Pelagic fisheries don't impact seamounts. 242 of the 247 seamounts in the Pacific Remote Islands are deeper than the range of pelagic gear at 500 meters or deeper

Longline

Purse Seine

200 m max depth

Monument Expansion Will Not Benefit Tuna Stocks

Large High Seas Closures Do Not Conserve Tunas

The 2010 and 2011 Western and Central Pacific Fisheries Commission's high seas pocket closures 1 & 2 did not work. Fishing effort moved from the high seas into adjacent EEZs. In fact total purse seine effort increased by 10% in the surrounding EEZs.

Effective Tuna Management Requires Broad-scale International Cooperation

All tuna stocks are healthy except bigeye overexploited from excessive catch of juveniles by 300 purse seiners operating with 15,000-30,000 Fish Aggregation Devices in Western and Central Pacific.

Tunas move huge distances in their lifetimes and don't stay in any exclusive economic zone. Even skipjack with a 3-year life span move over 1,000 miles and spawn profusely over a wide area.

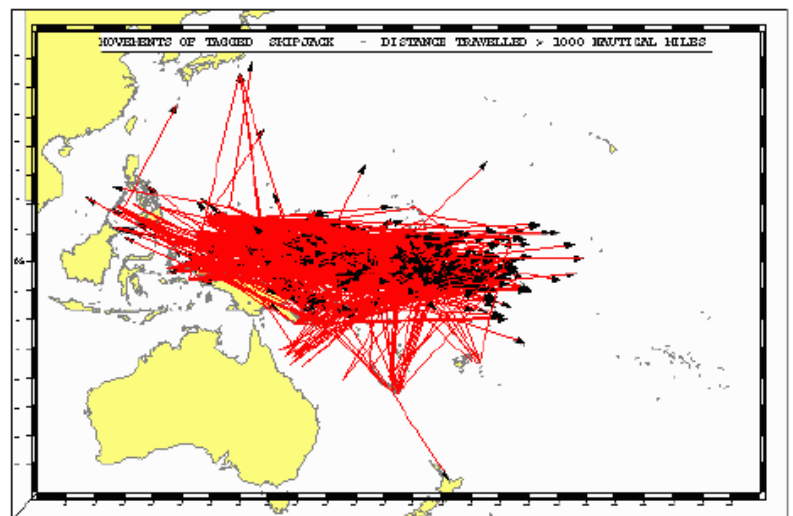

“The areas proposed are too small to impact the stock status of large tuna populations that span the Pacific Ocean. These are token closures and will have no real impact on the fishes of the ocean.”

*---Professor Ray Hilborn,
University of Washington*

“You'd need to close the entire Pacific Ocean.”

*--Professor Carl Walters,
University of British Columbia*

Monument Expansion Will Not Promote Large No-Fishing Marine Preserves in the Pacific

We believe that Kiribati has no intention of closing all fishing in its EEZ around the Phoenix Islands.

Value of fisheries in 2010 to Kiribati was about \$130 million or 80% of Gross Domestic Product.

Value of foreign vessel access fees ranges from \$30-\$40 million or 18-30% of Gross Domestic Product.

Kiribati continues to license foreign purse seiners (195) and longliners (256) to fish in its EEZ including the Phoenix Islands.

No country this dependent on fishing will close off entirely a major part of its EEZ to fishing.

Not even Palau, where fishing is second biggest earner after tourism.

Kiribati Expanding Domestic Fishing Fleet[†]

Purse seine fleets fishing in Phoenix Islands in 2013 = 76,000 t or 25% of Kiribati total

Kiribati Vessels Fish in the Phoenix Islands Protected Area.

(Left) Purse seine fishing in Pacific Islands Protected Area (PIPA). (Right) Longline fishing in PIPA.

A Better, Fairer Ocean Legacy for the US Pacific Islands Allows Well-Managed, Sustainable Fishing of a Renewable Resource

“Since 2006, unilateral presidential actions have taken the Northwest Hawaiian Islands (Papahānaumokuākea MNM), the northernmost submerged lands surrounding Uracas, Maug and Asuncion Islands in the Marianas archipelago (Marianas Trench MNM), and the only atoll in the Samoan archipelago (Rose Atoll MNM) from the very island communities that have been sustainably managing these resources for the past thousand years or so. Today, we must obtain permission from the federal monument management authorities if we wish to visit our ancestral waters. ... We believe the Western Pacific has given enough of our ocean resources for environmental legacies. We implore you to allow us to continue managing our fishery resources under the Magnuson-Stevens Act.”

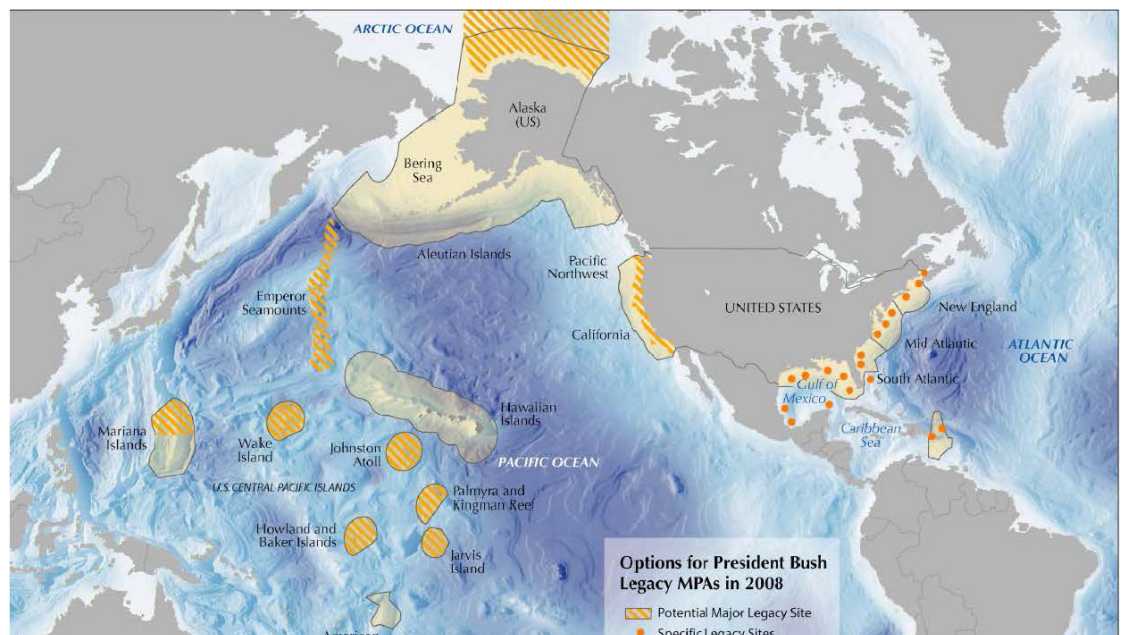

---CNMI Mayors of Saipan, Northern Islands, Rota, and Tinian & Aguiguan
